

SILVER PACKAGE CBS JOINTLESS SUPERFLAT FLOOR

INTRODUCTION

CBS Middle East's Silver package gives you a superflat laser poured high tolerance, steel fibre reinforced concrete floor that is suitable for high racking systems and heavy usage warehousing. It incorporates our industry leading QA, Safety, and Installation procedures using the best engineered steel fibres, additional anti crack reinforcement, a FM2 tolerance through out and with a robust dry shake power trowelled finish.

6 GREAT BENEFITS

1

Hardened Dryshake Surface

Dry shake finish gives a harder and more abrasion resistant finish than standard concrete. By using our mechanical spreaders we ensure a great coverage of dry shake powder is spread over the surface, giving you a more robust and damage resistant top surface to your concrete floor.

2

Powerfloated Finish Increases Abrasion Resistance

Through using multiple state of the art rideon powerfloats, we give a smooth and ridge free powerfloat finish to the dry shake topping that increases the abrasion resistance to surpass industry standard AR1.5.

3

Sealed Surface Inhibits Dusting up

Through spraying on a sealer coat, we both increase the durability of the surface and stop the dusting up that can occur with standard concrete.

4

Different Colours Available

We are able to offer the dryshake finish in a range of colours to give your floor space a permanent maintenance free colour. Ask for the range of ra colours available.

5

Non-Staining Surface

The dryshake finish, in conjunction with the sealer coat, gives a surface that resists staining, keeping the floor looking great for longer.

6

Fibre Supressing

Our 2mm coating of hardener minimises the appearance of fibres at the top surface, reducing the amount protruding significantly more than standard concrete finishing.
